

MYKONOS
CANDLEHOLDERS
AW 2018

MAY ARRATIA ESTUDIO / OCTOBER 2018

NEW MYKONOS CANDLEHOLDERS

Creative luxury home decor in high quality solid aluminum.

After the success at Hábitat Fair in Valencia - Spain, the designer and engineer **MAY ARRATIA** presents her new collection of customizable candleholders.

MODULAR DESIGNS

The possibilities of design variations are very broad, alternating the number and shape of the pieces to configure each candelabra, using the MYKONOS modules.

Our customers can select a **pre-established design** from our catalog, personalizing only the color combination, or **create their own** with our help.

MANUFACTURING PROCESS + MATERIAL

The parts are manufactured in solid aluminum of aeronautical quality, mechined — by turning and milling — at the ARRATIA's family workshop in Spain.

The color is added through the anodizing technique, an electrolytic process that inserts the pigment the inside the aluminum's pore. In this way, we will be able to increase the surface hardness of the material, in addition to coloring it without covering the drawings

that are created on the surface when machining it.

EXCLUSIVENESS

Each design manufactured upon request, and includes serial number and customer name laser engraved on the bottom of the candlestick.

CICLADAS COLLECTION

Inspired by the charm of the Greek islands and their mythological legends, this collection is conform by various luminaries, candleholders and vases that seek to play with the language of silhouettes and color, encouraging the self-expression of customers through the fertile geometry of the **Mykonos modules**.
